

“Training on OHS Risk Assessment in a Garment Manufacturing Industry”

Risk is everywhere; somewhere the risk related to life, somewhere the organs or somewhere the risk of losing the money. We are here to talk about the risk related to the occupation during the operation. We are concerned about the health and safety of the employees working in any company or processing unit.

All of your valuable brands want their products from a healthy and hygiene processing unit. None of the owner wants to see any accident in their factory. None of the worker wants to be injured during their work. Then why the accident happens very frequently? The answer is lack of awareness and competence of the workers, mid management and all the employees working in the factory.

We cannot make a risk free working condition always but we need to reduce the risk as much as possible. To reduce the risk, we need to know the risk first then we need to let others know.

After huge inquiries from the factories, we have designed a course to make compliance practitioners competent in assessing risks and take the necessary remedy to avoid any accident in workplace.

Best Regards

Fazlul Haque
